

BUSINESS BROCHURE 2026

Measure & maximize your AI return on investment.

The vendor-neutral AI portfolio cockpit for CIO and CFO offices. AI spend, use-case ROI and workforce capability, on one screen.

14 Questions & Answers

15 Why Now

16 Built on Trust

Your AI is optimized. Your employees aren't.

AI tools are bought faster than any software category before them. Licenses land on departmental cards, pilots multiply, and the invoices stack up across a dozen vendors that no single person reconciles.

The benefit side stays unmeasured. Most AI budgets are still justified on projected savings. You know the line. "Five minutes per task across two hundred people." Almost nobody checks it against the P&L afterward.

Business case analytics in AIXXEN. Projected potential is pulled back to realized value.

\$307B

Enterprise AI spend in 2025
IDC, AI Spending Guide, 2025

30%+

of GenAI projects abandoned after
proof of concept
Gartner, 2024

37%

of firms have a policy to manage
shadow AI
IBM, Cost of a Data Breach, 2025

A gap has opened between what AI is
assumed to deliver, and what it has delivered.

Adoption raced ahead of accountability.

95%

of enterprise generative-AI pilots show no measurable P&L impact.

MIT NANDA, The GenAI Divide, 2025

5%

of companies capture AI value at scale. 60% see none at all.

BCG, The Widening AI Value Gap, 2025

88%

use AI, yet only about 6% see meaningful EBIT impact.

McKinsey, The State of AI, 2025

1 in 5

organizations qualify as AI ROI Leaders that measure return.

Deloitte, AI ROI: The Paradox, 2025

Three independent methodologies, one finding. The constraint is not the technology. It is the absence of measurement, governance and a hard-versus-soft discipline. That gap is what AIXXEN closes.

03 WHAT WE DO

See your entire AI portfolio on one screen.

Every dollar paid to every AI vendor. Use-case-by-use-case ROI. A five-year plan of record. One screen, one tab.

AIXXEN is a portfolio cockpit, not a compliance tool. Vendor-neutral by design, no compliance overhead. The job is narrow. Measure AI benefits, and show where the money works.

The AIXXEN portfolio dashboard. Total AI spend, realized ROI and capability score, in one glance.

Portfolio dashboard

Total AI spend, realized ROI, capability score and top use cases. Readable in under ten seconds.

Vendor spend tracking

Every AI vendor, every invoice, every renewal cliff. Sorted by lifetime spend, flagged before auto-renewal.

Use cases & business cases

Hard P&L savings and soft potential separated at the data model.

Capability measurement

A capability factor calibrated to your organization adjusts every soft projection.

Works with your stack. OpenAI, Microsoft Copilot, Google Gemini, Anthropic, Notion AI, Glean, Gamma and any other vendor.

Hard savings. Soft potential. Never blended.

The number your CFO sees is defensible because it earned its way there. It was never quietly mixed with a vendor's optimistic projection. AIXXEN keeps the two apart at the data-model level.

REALIZED SAVINGS (ATTESTED)

129k USD

Hard savings · books-quality · 4 attestors

\$ booked only

Hard savings. Booked, attested, and the only number that reaches the board-pack total.

SOFT BENEFIT POTENTIAL

4.2M USD

Potential — not in board-pack totals

Soft potential. Capacity freed, reduced automatically by your capability factor. Tracked, never in the headline.

Six numbers. One coherent answer.

Together these six answer the question every AI program reaches sooner or later. Is this worth it?

AI OPEX (MO) 50k USD ▼ 0.0% MoM Total AI tool spend this month	CAPACITY RECAPTURED 9,261.667 hrs Measured + estimated	REALIZED SAVINGS (ATTESTED) 129k USD Hard savings - books-quality - 4 attestors \$ booked only	SOFT BENEFIT POTENTIAL 4.2M USD Potential — not in board-pack totals
---	--	--	--

Vendor lifetime spend

Stacked spend over time, concentration risk flagged above 40%, a renewal Gantt and an invoice ledger.

Hard P&L savings

Attested savings that have moved through the P&L. Their own column, always.

Soft potential

Capacity freed, reduced by your capability factor. Not a vendor benchmark.

Five-year plan of record

Contracted costs, planned business cases and realized savings, sixty months forward.

Shadow AI signal

Spend you do not see yet, surfaced through spend-anomaly detection.

Board-pack reports

Any cross-source query as a table, bar, line, pie or KPI. CSV export.

Tools & Vendors

Every dollar paid to every AI vendor, on one page.

Stacked spend over time. Top-vendor concentration. A cost-versus-utilization quadrant that makes the tools wasting money visible at once. A renewal Gantt, an invoice ledger. No procurement workflow, no PO numbers. This is cost controlling, full stop.

Vendor spend tracking. Lifetime spend, concentration and renewals on one view.

40%

Concentration risk threshold

90 days

Renewal warning window

1 click

To sort lifetime spend

Use Cases & Business Cases

Hard and soft benefits, separated at the data model.

Every AI use case is tracked across its whole life. Idea, pilot, production, review. Each one carries a typed business case, and the capability factor is applied automatically. No vendor's pitch number ever lands in your CFO's spreadsheet untouched.

The use-case and business-case view. Hard and soft benefits, typed and separated.

Idea

01

Logged with an owner and a typed business case.

Pilot

02

Soft potential estimated, capability-adjusted.

Production

03

Hard savings attested as they hit the P&L.

Review

04

Projected versus realized, side by side.

The Five-Year Roadmap

A plan of record across the next sixty months.

Contracted costs. Planned business cases. Realized savings, extending forward. Cluster filters by status, department, vendor, capability or value stream. It is not a forecast, not a Monte Carlo simulation, not built on AI uplift multipliers. It is what is already on the books.

The five-year roadmap. Contracted costs, planned cases and realized savings on one timeline.

Custom reports. Capability scoreboards. Board-pack ready.

Build any cross-source query as a table, bar, line, pie or KPI. A capability score per department, adoption breadth and shadow-AI share sit alongside spend, never apart from it.

Custom reports and capability scoreboards. Board-pack ready, CSV-exportable.

The capability factor

Capability is calculated from real usage data. Adoption rates, active users, workflow integration. The result is calibrated to your organization rather than a vendor benchmark, so optimistic estimates fall back to the level your teams can really reach.

Three steps to a working cockpit.

01

Setup

Bring four data sources. Tools, spend, user count and use cases. CSV or Excel works today, with direct API import on the roadmap. Most enterprises already export this from procurement and HR.

02

First capability snapshot

AIXXEN calculates your capability factor from real usage data. Adoption rates, active users, workflow integration. Calibrated to your organization, not a vendor benchmark.

03

Reporting

Vendor lifetime spend, hard versus soft realized savings, the roadmap and department readiness. All on screen, all exportable as CSV.

Built for three jobs. Worked around for none.

The CFO

A defensible number. Hard booked savings and soft potential live in different columns, and soft potential never reaches the board-pack total.

The CIO

Spend and readiness on one screen, so AI program decisions are informed by both at once.

The FinOps lead

The operator's data layer. Utilization versus cost, shadow-AI share, soft-to-hard convergence, custom reports.

One surface, three vantage points. The CFO, the CIO and the FinOps lead read the same data model, each filtered to the view their job needs. A decision taken in the board room and a decision taken in the spreadsheet stay consistent.

The C-suite view, in under ten seconds.

The portfolio dashboard is the first screen leadership sees. Total AI spend, realized ROI, capability score, top use cases, renewal exposure and shadow-AI share. If the portfolio cannot be read at a glance, it will not be read at all.

Use cases launched, pilot against production, over the trailing six months.

Stacked AI cost and realized savings across the portfolio horizon.

A company built around one missing number.

Philipp Eiselt
Founder, AIXXEN

AIXXEN started from a single observation. Enterprises can tell you to the cent what they spend on AI, and almost nothing about what it returns.

We build AIXXEN for the CIO and CFO offices carrying that gap. The product does one thing well. It turns scattered, unmeasured AI spend into a tracked portfolio, with use-case ROI, a hard-versus-soft savings split, and the governance view that AI programs now need.

Our vision is plain. AI accountability should be ordinary practice, the way SaaS cost control became ordinary a decade ago. Every AI dollar measured against the value it returns. No blended numbers, no vendor benchmarks standing in for evidence.

AIXXEN is early, and deliberately so. We would rather be the vendor-neutral system of record an AI portfolio is run on than another tool competing for a slice of the budget it is meant to measure.

THE VISION

“If you cannot measure it, you cannot defend it. AIXXEN exists so that every AI dollar an enterprise spends can be weighed against the value it returns.”

Sharp questions, sharp answers.

How do you calculate ROI on AI investments?

AI ROI is the realized financial benefit minus the total cost of ownership, divided by that cost. AIXXEN calculates it per use case, so you see which AI tools clear the bar and which do not.

What is AI governance, and how does AIXXEN support it?

It is the set of controls that keep AI usage visible, accountable and aligned with policy. AIXXEN provides the inventory behind it, every tool with its spend, owner and measured ROI on one screen.

How do you measure the benefits of AI correctly?

By separating projected potential from realized savings. AIXXEN tracks benefits against a baseline and counts only realized value.

Is AIXXEN vendor-locked?

No. AIXXEN is vendor-neutral by design. Every AI tool you pay for sits on the same page, regardless of vendor.

How quickly can we be live?

Onboarding is small and pragmatic. CSV and Excel import work today. Direct API import is on the roadmap.

The audit gap is closing fast.

What generic SaaS did over a decade, AI is doing in a few years. It spreads across departments, lands on cards, and compounds quietly into a serious line item.

Finance teams are catching up on the cost side. The discipline that took years to arrive for SaaS is arriving for AI much faster. The benefit side lags. Whether any of it returned the investment is still largely unmeasured.

Closing fast

The audit gap, knowing what AI costs. Procurement and finance are already moving on it.

Wide open

The ROI gap, knowing what AI returns. Still unmeasured in most organizations.

The organizations that measured SaaS ROI early spent the next decade with an advantage. AI is the same opportunity, on a shorter clock.

Vendor-neutral. No compliance overhead.

Vendor-neutral by design

Every AI tool you pay for sits on the same page, regardless of category or vendor. AIXXEN never steers you toward a preferred stack.

No compliance overhead

A portfolio cockpit, not a compliance regime. Visibility without adding process for your teams to carry.

Your data, your numbers

The capability factor is calibrated to your organization, not a vendor benchmark. The numbers you report are yours.

Import on your terms

CSV and Excel import work today. Direct API import is on the roadmap. You decide how your data reaches the cockpit.

Shadow AI, surfaced the right way

Unmanaged AI spend is real. It should not be hunted through network monitoring. AIXXEN surfaces shadow AI through spend-anomaly detection. A finance signal, not a surveillance one.

GET STARTED

Stop confusing soft potential with realized savings.

Book a 30-minute demo. Bring a sense of your AI tools, spend and use cases, and leave with a clear picture of what a portfolio cockpit would show you.

01 Book a demo

Email sales@aixxen.com to arrange a 30-minute walkthrough.

02 Talk through your data

We map your tools, spend, headcount and use cases to the four data sources.

03 See your cockpit

The screens populate and we agree a realistic onboarding timeline together.
